

Vinícius Roveri Rocha

Hi! My name is **Vinícius** and I'm a **Web Developer** and **Animator** specialized in Front-End Development since 2022!

Graduated in Animation Design and migrating to a career as a programmer, throughout my journey I always knew how to combine technical knowledge with an artistic vein, and I used this to bring a differential to any project I participated in, always bringing together the best of the valences of logical reasoning and problem solving with the lightness and creativity inherent to art.

Work Experience:

Web Developer @ Rumo Soluções - 09/2024 to Present

Working as a web developer focused on front-end development at Rumo, a Microsoft Business Partner and IT service company. I create the front-end of SaaS web applications for businesses, and work on the integration with their given APIs. In front-end development I use C# with Razor Pages of ASP.NET to both create the screens and connect to the APIs, which are made as microservices in ASP.NET with Entity Framework. I also work under the SCRUM agile methodology for team productivity management, and often participate on meetings for alignment of projects' business rules, both with clients and with other team members.

Web Developer Intern @ Rumo Soluções - 04/2023 to 09/2024

Worked as an intern in all areas of web development at Rumo. I worked creating full-stack web applications, with my main role being integrating front-ends made in HTML, CSS and JavaScript, with back-ends that I also created in C# using ASP.NET with the Entity Framework.

Main Personal Project:

My Portfolio

Project where I showcase all my abilities in Web Development, UX design, Motion Graphics and 3D Modelling, all merged together in one single piece. Made using various professional and industry standard tools for the front-end development such as the NextJS framework, GSAP for JavaScript animations, React Three Fiber which is an extension of the ThreeJS library, Bodymovin & Lottie-Web for making After Effects animations web-ready, and a whole more that when combined with the standard NextJS, React, Typescript & Tailwind, create the art you see on the screen.

You can check out this project [here](#)

Education:

- I have over 700 hours of courses completed at Alura, one of the biggest tech online schools in Brazil. This knowledge covers all the necessary technologies in Web Development, and everything that can be deepened within each.
- I graduated in Animation Design at Faculdade Melies, one of the most prestigious art colleges in South America. This graduation gave me all the foundation of the art, animation and modelling concepts I have today.

Languages:

- **Portuguese:** Native, **English:** Fluent, **Spanish:** Advanced, **German:** Intermediary.
